

Other Profiles

We have hundreds of profiles to choose from. Ask our representative or contact us directly for more details.

Still not satisfied? Then challenge us with your own design as we can create almost any shaped profile!

Material Properties

Made from polystyrene, ShapeSmart cornices are crack resistant, waterproof and have an indefinite lifetime.

These cornices are solvent and CFC free, and have flame retardant properties. In excess of 80% of the European market has already switched to polystyrene cornices.

Installation

ShapeSmart cornices are relatively easy to install as they are lightweight and require no screws or nails. They are simply fixed by means of water based acrylic adhesive. As this product is easy to cut with a hot-wire knife, the result is perfectly crisp corners.

As a guideline, a medium sized cornice would require between 50 and 100 ml of glue depending on the straightness and finish of the wall. Larger cornices may require between 100 and 200 ml.

Cuts or bad dents can simply be filled with adhesive.

Remember to ask us about our installation services.

Painting

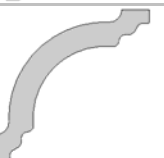

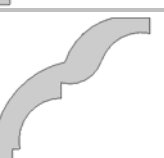

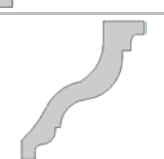

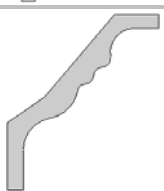

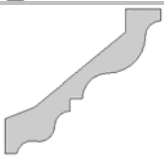

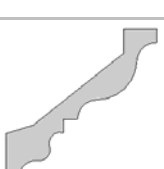

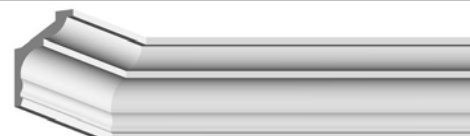

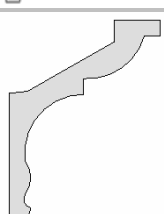

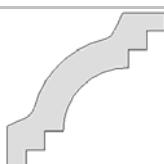

The product can be painted with acrylic based paint (PVA). Please note that solvent based paints are to be avoided unless an acrylic primer is used first.

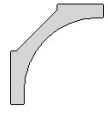

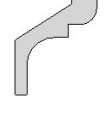

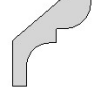

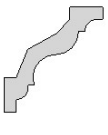

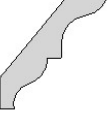

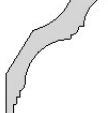

Other Applications

With sufficient clearance, low voltage or fluorescent lights can be mounted in some of the larger profiles to provide soft indirect lighting. However, extreme heat from insufficient clearances or unsuitable globes may damage the cornices.
